Bass Reflex system

Different music must be played using different method. That is why Csp offers so many series of products. It is appropriate to say that the CLS series is designed for live performance.

Live musical performance has special requirements for sound restoration. For example, we first consider flexibility for low frequency. (We also take strength into consideration but not much.) What mid to high frequency requires is penetration, not smoothness and fineness. Whether low frequency, mid or high frequency, they all require sufficient large receiving power capability. These are what CLX possess.

The CLX918B features an 18LV3 18" woofer in a compact vented enclosure for bass performance to 30 Hz. Maximum SPL is 132 dB with full power in at 1 meter.

CLX918B sub woofer when used with our full-range speakers give a whole new meaning to the sound and feel of bass and the power that low end has to draw the audience and dancers in and give them energy.
